AI-Assisted Production Workflow

Willow & Sage — Fictional Natural Skincare Brand

Project 02 | Beginner Level | Draft report for completion and evidence capture

Important: This is a working draft and planning pack, not proof that every listed asset has already been generated or manually edited. Replace tool placeholders with the actual tool names, settings, original outputs, edited outputs and screenshots from your own work.

1. Brand Brief

Brand: Willow & Sage (fictional). **Category:** natural skincare and everyday self-care. **Audience:** adults aged 18–35 interested in calm routines, simple design and nature-inspired products. **Tone:** calm, honest, warm, reassuring and not overly promotional. **Visual style:** cream backgrounds, sage green, botanical details, soft natural light, uncluttered compositions and realistic product photography. **Core message:** “Natural care. Real you.”

Creative guardrails

Keep a consistent palette and lighting direction. Leave negative space for typography that will be added manually in Canva. Do not rely on image generators for exact spelling, logos, ingredient labels or factual product claims. Use a fictional product and do not imply clinical benefits or certifications that have not been verified.

2. Twelve-image production plan

Use the prompt log spreadsheet to record the exact prompt used for each asset, the actual tool/version, aspect ratio, settings, date and output filename. The prompts below are starting prompts: paste them into the tool you actually use and save the exact final wording after any edits.

ID	Asset	Prompt focus
IMG-01	Hero product photo	Photorealistic premium skincare jar and dropper bottle on pale natural stone, fresh green leaves, warm soft morning light, clean cream-and-sage palette, editorial beauty campaign, realistic packaging, no extra text, square composition.
IMG-02	Skincare routine	Close-up editorial portrait of an adult woman applying a pale green facial mask, eyes closed, calm self-care mood, soft daylight, natural skin texture, cream and sage palette, realistic photography, no text.
IMG-03	Ingredient macro	Macro photograph of fresh green leaves with clear water droplets, soft natural backlight, shallow depth of field, botanical skincare campaign, restrained sage-green palette, photorealistic, no text.
IMG-04	Nature inspiration	Peaceful mountain valley at sunrise with gentle mist, soft golden light, muted green and warm cream tones, premium wellness editorial photography, natural atmosphere, no people, no text.
IMG-05	Product flat lay	Overhead flat lay of a skincare jar and dropper bottle with green leaves and pale linen on a warm cream background, balanced negative space, soft diffused daylight, minimal premium product photography, no readable text.
IMG-06	Wellness lifestyle	Adult woman seen from behind in a bright, calm bathroom, preparing for a skincare routine, neutral linen robe, plants and warm daylight, understated natural beauty editorial, cream and sage palette, no text.
IMG-07	Cream texture	Extreme close-up of a smooth ivory skincare cream swatch on a matte cream surface, soft directional light, elegant shadows, minimal cosmetic texture photography, high detail, no packaging, no text.
IMG-08	Product detail	Minimal skincare dropper bottle beside small white flowers and fresh leaves on pale stone, warm natural light, realistic glass reflections, calm premium campaign style, no legible label text.
IMG-09	Self-care moment	Quiet morning self-care scene with a ceramic cup, folded linen, a small plant and skincare product on a wooden table, sunlit, warm and inviting, muted natural colors, editorial still life, no text.
IMG-10	Hand holding product	Close-up of an adult hand holding a plain cream skincare jar, natural skin detail, botanical background softly blurred, soft daylight, premium minimal beauty advertising, correct hand anatomy, no readable text.
IMG-11	Wildflower field	Small white wildflowers and green meadow leaves in gentle morning light, shallow depth of field, calm natural skincare campaign mood, muted greens and cream whites, realistic photography, no text.
IMG-12	Brand background	Minimal warm cream background with a simple sage-green botanical sprig motif in one corner and generous empty space for later typography, clean flat-lay design, no words or letters.

3. Iteration evidence

For each of these three examples, save the first image and final image as separate files. Capture the exact prompt change in the log; do not present a suggested prompt change as if it had already been tested.

IMG-01 Product hero

First attempt: First attempt: product centered on a plain background; leaves and shadows compete with the jar.

Prompt revision: Final prompt change: ‘simpler background, fewer leaves, jar label unobstructed, soft diffused daylight, clear negative space’.

Why: Reason: improve product visibility and reduce clutter.

Evidence to insert: [Insert first-attempt image] and [Insert final image], plus screenshots or the exact prompts used.

IMG-02 Mask portrait

First attempt: First attempt: overly smooth skin and inconsistent mask edges.

Prompt revision: Final prompt change: ‘natural skin texture, realistic mask edge, subtle pores, soft side light, no beauty-filter look’.

Why: Reason: reduce artificial-looking skin and improve realism.

Evidence to insert: [Insert first-attempt image] and [Insert final image], plus screenshots or the exact prompts used.

IMG-04 Nature landscape

First attempt: First attempt: saturated colors and dramatic contrast.

Prompt revision: Final prompt change: ‘muted sage greens, pale golden sunrise, soft atmospheric haze, restrained contrast, editorial calm’.

Why: Reason: match the brand’s gentle palette.

Evidence to insert: [Insert first-attempt image] and [Insert final image], plus screenshots or the exact prompts used.

4. Human editing pass

At least four images must show a visible manual improvement. Use Photopea, Photoshop or Canva and save both before and after versions. The edits below are a plan; record the actual changes you make.

IMG-01

Before: cluttered background and label partly obscured. After: crop tighter, remove distracting leaf, improve exposure, keep label visible.

Evidence: [Insert before image] → [Insert edited image]. Name files consistently, for example IMG-01_before.png and IMG-01_after.png.

IMG-02

Before: skin looked overly smooth; mask edge was uneven. After: subtle texture correction and careful retouching; do not misrepresent real product results.

Evidence: [Insert before image] → [Insert edited image]. Name files consistently, for example IMG-01_before.png and IMG-01_after.png.

IMG-05

Before: uneven spacing and visual imbalance. After: align product, simplify props, adjust white balance and add negative space.

Evidence: [Insert before image] → [Insert edited image]. Name files consistently, for example IMG-01_before.png and IMG-01_after.png.

IMG-08

Before: bottle reflections were too strong and flowers crowded the product. After: reduce highlight intensity, crop flowers back, refine contrast.

Evidence: [Insert before image] → [Insert edited image]. Name files consistently, for example IMG-01_before.png and IMG-01_after.png.

5. AI copy and edit tracking

The spreadsheet contains 10 short draft/edit pairs. Use these as drafts, then adjust them to your own voice. Keep a record of what you changed and why. Check that any factual or product claims are supported before publishing.

ID	AI draft	Edited version	Reason
CP-01	Glow naturally with our skincare range.	A calmer routine starts with thoughtful skincare.	Makes the tone more grounded and less sales-heavy.
CP-02	Pure ingredients for healthy skin.	Simple ingredients. A little care, every day.	Shorter and more conversational; avoids an unsupported health promise.
CP-03	Feel the difference.	Make space for a softer, slower routine.	More specific to the brand’s self-care positioning.
CP-04	Clean beauty for a better tomorrow.	Choose a routine that feels good to you.	Avoids broad environmental claims that would need evidence.
CP-05	Nature’s best for your skin.	A little nature in your everyday routine.	Warm, accessible wording rather than an absolute claim.
CP-06	Be kind to your skin.	Kind skin care. Calm moments.	More memorable and aligned with the calm visual identity.
CP-07	Healthy skin, happy you.	Your routine, at your own pace.	Avoids implying guaranteed outcomes.
CP-08	Self-care is not a luxury.	Small rituals. A little more time for yourself.	More concrete and gentle.
CP-09	Your skin deserves better.	Give your routine the care it deserves.	Less judgmental and more welcoming.
CP-10	Natural. Simple. Effective.	Natural in spirit. Simple by design.	Keeps the minimalist tone without an unverified effectiveness claim.

6. Short video plan (20–40 seconds)

Suggested duration: 30 seconds. Assemble in CapCut using your generated/edited images or clips, transitions, licensed audio and manually checked typography. Export as MP4 and retain the project file if possible.

Time	Visual	Editing direction and on-screen text
0–5 sec	Product hero	Slow push-in on jar and dropper bottle; soft instrumental audio. On-screen text: Willow & Sage
5–12 sec	Routine	Adult person applying a face mask / gentle self-care moment. On-screen text: Make space for a calmer routine
12–20 sec	Nature and texture	Leaves, cream texture, wildflowers; use gentle crossfades. On-screen text: Simple rituals. Thoughtful care.
20–30 sec	Brand close	Return to product hero and logo card. On-screen text: Natural care. Real you.

Video checklist: 20–40 seconds; consistent colors; legible text added manually; smooth pacing; licensed or royalty-free audio; no unsupported skincare claims; final MP4 checked on playback.

7. Repeatable workflow

• Define the brand, audience, tone, palette and message.

• Generate 12 images using the logged prompts and chosen tools.

• Save every prompt exactly as used, along with tool/version, settings, date and filename.

• Choose three images for prompt iteration; save first attempt, revised prompt and final result.

• Manually edit at least four images; preserve before/after evidence.

• Draft 10 pieces of copy with AI, revise them yourself and explain the reason for each change.

• Assemble and export a 20–40 second video in CapCut.

• Write the limitations report, disclose AI use and credit any third-party assets.

• Organize all deliverables in one Google Drive folder and test the view link in a private browser window.

8. Limitations and risk notes

Image generators may produce inaccurate hands, distorted packaging, gibberish text, inconsistent product details and lighting that changes between outputs. Generated images can also make ingredients or results look more certain than the evidence supports. Text placement and logos should be added and checked manually. Human review is necessary for visual consistency, accessibility, factual accuracy and brand suitability.

During testing, document the failures you actually observe. Include at least one specific example for each major limitation you report, with a screenshot or filename where possible. Do not claim a tool failed in a particular way unless you observed it.

9. AI disclosure statement

“AI-assisted tools were used to generate initial visual concepts, draft copy and support the video workflow for this fictional Willow & Sage campaign. The prompts and tools used are documented in the accompanying logs. Selected images were manually reviewed and edited, and copy was revised by the author. Any third-party fonts, audio, icons or other assets are to be credited and used under their applicable licences.”

10. Final submission checklist

■ 12 final PNG/JPG images

■ Prompt log with exact prompts, actual tools and settings

■ Three iteration comparisons (first attempt and final version)

■ At least four human-editing before/after comparisons

■ Copy document with 10 AI drafts, edited versions and reasons

■ 20–40 second MP4 video

■ 6–8 page workflow and limitations report

■ AI disclosure and third-party asset credits

■ Single Google Drive folder set to Anyone with the link can view

■ Folder link tested in a private browser window; official submission form completed

File naming: follow the brief’s requested naming pattern, tsg-ai-p02-yourname, and use clear filenames for individual assets. Replace “yourname” with your own name as instructed by the program.

Deadline in the brief: 12 October 2026, 11:59 PM PKT. Confirm the current submission instructions and form before uploading.
